Advisory Action	10/608,787	LEE ET AL.			
Advisory House	Examiner	Art Unit	-		
	Andrew Wright	3617			
The MAILING DATE of this communication appe	ars on the cover sheet with the o	orrespondence add	ress		
THE REPLY FILED 15 December 2004 FAILS TO PLACE THIS APPLICATION IN CONDITION FOR ALLOWANCE. Therefore, further action by the applicant is required to avoid abandonment of this application. A proper reply to a final rejection under 37 CFR 1.113 may only be either: (1) a timely filed amendment which places the application in condition for allowance; (2) a timely filed Notice of Appeal (with appeal fee); or (3) a timely filed Request for Continued Examination (RCE) in compliance with 37 CFR 1.114.					
PERIOD FOR REPLY [check either a) or b)]					
a) The period for reply expiresmonths from the mailing date of the final rejection. b) The period for reply expires on: (1) the mailing date of this Advisory Action, or (2) the date set forth in the final rejection, whichever is later. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of the final rejection. ONLY CHECK THIS BOX WHEN THE FIRST REPLY WAS FILED WITHIN TWO MONTHS OF THE FINAL REJECTION. See MPEP 706.07(f).					
Extensions of time may be obtained under 37 CFR 1.136(a). The dath have been filed is the date for purposes of determining the period of extension CFR 1.17(a) is calculated from: (1) the expiration date of the shortened (b) above, if checked. Any reply received by the Office later than three more patent term adjustment. See 37 CFR 1.704(b).	sion and the corresponding amount of the I statutory period for reply originally set in	efee. The appropriate ex the final Office action; or	tension fee under (2) as set forth in		
1. A Notice of Appeal was filed on Appellant' 37 CFR 1.192(a), or any extension thereof (37 CF	s Brief must be filed within the pR 1.191(d)), to avoid dismissal	period set forth in of the appeal.			
$2. \boxtimes$ The proposed amendment(s) will not be entered b	ecause:				
(a) ☑ they raise new issues that would require further consideration and/or search (see NOTE below);					
(b) ☐ they raise the issue of new matter (see Note below);					
(c) they are not deemed to place the application in better form for appeal by materially reducing or simplifying the issues for appeal; and/or					
(d) they present additional claims without canceling a corresponding number of finally rejected claims.					
NOTE: See Continuation Sheet.					
3. Applicant's reply has overcome the following rejection	ction(s):				
4. Newly proposed or amended claim(s) would canceling the non-allowable claim(s).	l be allowable if submitted in a s	separate, timely file	d amendment		
5. ☑ The a) ☐ affidavit, b) ☐ exhibit, or c) ☑ request for application in condition for allowance because: See		sidered but does No	OT place the

Continuation of 2. NOTE: The proposed amendments to independent claims 1, 8, and 17 change the scope of the claims such that further consideration and search would be necessary.

Continuation of 5. does NOT place the application in condition for allowance because: Applicant's arguments regarding independent claim 10 are not persuasive. Claim 10 recites "such that directing the engine exhaust out of one of the exhaust outlets prevents directing the engine exhaust out of the other of the exhaust outlets". Polakowski has a mode of operation that satisfies this claim limitation. In Polakowski, when the linkage is in the full rotated clockwise position, the apparatus is directing engine exhaust out of one exhaust outlet and preveting the engine exhaust form being directed out of the other outlet.

Applicant's arguments regarding claim 5 are not persuasive. Polakowski uses the phrase "mechanical linkage" in lines 35-40 while referring to the control mechanism described with respect to figures 11-16. Furthermore, even assuming for argument's sake that applicant's dictionary definition is read into the claim language, Polakowski still reads on the claim. First, claim 5 recites "comprises amechanical linkage between the valves". The lever (170) is pivotally supported by a rod (172). Therefore the tethers need not be considered and the lever is part of a mechanical linkage. Second, even if the tethers are considered, they still constitue a rigid body. The degree of rigidity is not claimed or defined in the specification. Every material has some inherent degree of rigidity. The inherent rigidity of the tether, regardless of how small it may be, reads on the provided definition.

Applicant's arguments regarding claims 4 and 13 are not persuasive. Polakowski discloses electrically controlled valves (controlled directly by a servomotor). Polakowski discloses that the valves would be controlled by a switch. The switch constitues the "controller unit" that is recited in claims 4 and 13.
